Section 1 : Coding

1. Problem Statement

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is: index = roll_number % table_sizeOn collision, check subsequent indexes (i+1, i+2, ...) until an empty slot is found.

You need to:

Insert a list of n student roll numbers into the hash table.Print the final state of the hash table. If a slot is empty, print -1.

Input Format

The first line of the input contains two integers n and table_size, where n is the

number of roll numbers to be inserted, and table_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

Output Format

The output should print a single line with table_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 4 7
50 700 76 85

Output: 700 50 85 -1 -1 -1 76

Answer

```
#include <stdio.h>

#define MAX 100

// You are using GCC
void initializeTable(int table[], int size) {
    //Type your code here
    for(int i=0;i<size;i++)
    {
        table[i]=-1;
    }

}

int linearProbe(int table[], int size, int num) {
    //Type your code here
    int ind=num%size;
    int start=ind;
    while(table[ind]!=-1){
```

```
        ind=(ind+1)%size;
        if(ind==start)
            return -1;

    }
    return ind;
}

void insertIntoHashTable(int table[], int size, int arr[], int n) {
    //Type your code here
    for(int i=0;i<n;i++){
        int pos=linearProbe(table,size,arr[i]);
        if(pos!=-1){
            table[pos]=arr[i];
        }
    }
}

void printTable(int table[], int size) {
    //Type your code here
    for(int i=0;i<size;i++){
        printf(" %d",table[i]);

    }
    printf("\n");
}
int main() {
    int n, table_size;
    scanf("%d %d", &n, &table_size);

    int arr[MAX];
    int table[MAX];

    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);

    initializeTable(table, table_size);
    insertIntoHashTable(table, table_size, arr, n);
    printTable(table, table_size);

    return 0;
}
```
